National Geographic Explorer and TED Prize-winner Dr. Sarah Parcak welcomes you to the exciting new world of space archaeology, a growing field that is sparking extraordinary discoveries from ancient civilizations across the globe. In Archaeology from Space, Sarah Parcak shows the evolution, major discoveries, and future potential of the young field of satellite archaeology. From surprise advancements after the declassification of spy photography, to a new map of the mythical Egyptian city of Tanis, she shares her field's biggest discoveries, revealing why space archaeology is not only exciting, but urgently essential to the preservation of the world's ancient treasures. Parcak has worked in twelve countries and four continents, using multispectral and high-resolution satellite imagery to identify thousands of previously unknown settlements, roads, fortresses, palaces, tombs, and even potential pyramids. From there, her stories take us back in time and across borders, into the day-to-day lives of ancient humans whose traits and genes we share. And she shows us that if we heed the lessons of the past, we can shape a vibrant future. Includes Illustrations

Method and Theory in Archaeology
Archaeology: A Brief Introduction is an introduction to the fundamental principles of method and theory in archaeology, exposing students to archaeology as a career. The text begins by covering the goals of archaeology, and then moves on to consider the basic concepts of culture, time, and space, by discussing the finding and excavation of archaeological sites. By providing a distinct emphasis on the ethics behind archaeology, and how we should act as stewards of the finite records of the human past, Archaeology: A Brief Introduction continues to be a book with a truly international perspective, not simply focusing on North America or Europe. Teaching and Learning Experience
Improve Critical Thinking - Archaeology: A Brief Introduction's "Archaeology and You" chapter provides students with career advice in an era when archaeology is transitioning from predominantly academic to professional. Engage Students - Each chapter within Archaeology: A Brief Introduction highlights important finds that have shaped our archaeological perspective, and a global perspective that shows students that archaeology is the most global of all sciences, encompassing all of humanity.

Geophysics operations in archaeology have become well known through exposure on television. However, the technique is presented as the action of specialists and something of a mystery, where people walk about with strange contraptions, and results appear from a computer. This is not the case, however. Some scientific knowledge is needed in order to understand how the machines work and what they detect but otherwise it is only necessary to know how to handle the instruments, how to survey a field and how to interpret the computer results. This book provides all the relevant information. It explains geophysics operations in archaeology, describes the science that gives the soil properties to measure and the means by which the instruments make their measurements. Dr John Oswin is in charge of the geophysics operation of the Bath and Camerton Archaeological Society and his work has recently been the subject of a television programme. He has taught many students how to use geophysical equipment.

A must for anyone considering the study of archaeology, designed to provide the reader with everything they should know when embarking on an archaeological course, whether A Level or first year undergraduate.

Over the centuries, researchers have found bones and artifacts proving that humans like us have existed for millions of years; the author argues, however, that mainstream science has suppressed these facts and that prejudices based on current scientific theory act as a "knowledge filter," giving us a picture of prehistory that is largely incorrect.

Covering archaeology from a range of angles, incorporating history, major themes, theories and methods, Doing Archaeology provides a firm grounding for anyone interested in learning more about the discipline. Throughout the book, key information is accessibly presented and important questions are answered, including: What is archaeology? How did archaeology begin? How can archaeology tell us about the past? How can archaeology tell how people use space and the landscape? How can we use the past to understand people? How do archaeology and 'heritage' interact? What role does archaeology play in society today? How do we practice archaeology? Drawing on the experiences of practising archaeologists, with engaging examples and studies from sites around the world, this book gives the reader a sense of what is it to study archaeology and be an archaeologist. An essential text for students studying A-Level archaeology, those considering or beginning a degree/foundation degree in archaeology, and those of all ages interested in volunteering or becoming involved in archaeological projects.
