The book contains high quality papers presented in conference Recent Advances in Mechanical Infrastructure (ICRAM-2019) held at IITRAM, Ahmedabad, India from 20-21 April, 2019. The topics covered in this book are recent advances in thermal infrastructure, manufacturing infrastructure and infrastructure planning and design.

This unique book presents a framework for the strategy and methodology of diagnostic research, in relation to its relevance for practice. Now in its second edition The Evidence Base of Clinical Diagnosis has been fully revised and extended with new chapters covering the STARD guidelines (STAndards for the Reporting of Diagnostic accuracy studies) and the multivariable analysis of diagnostic data. With contributions from leading international experts in evidence-based medicine, this book is an indispensable guide on how to conduct and interpret studies in clinical diagnosis. It will serve as a valuable resource for all investigators who want to embark on diagnostic research and for clinicians, practitioners and students who want to learn more about its principles and the relevant methodological options available.

This book presents selected research papers of the AIMTDR 2014 conference on application of laser technology for various manufacturing processes such as cutting, forming, welding, sintering, cladding and micro-machining. State-of-the-art of these technologies in terms of numerical modeling, experimental studies and industrial case studies are presented. This book will enrich the knowledge of budding technocrats, graduate students of mechanical and manufacturing engineering, and researchers working in this area.

This classic dictionary answers questions such as these and explains the origins of over 16,000 names in current English use. It will be a source of fascination to everyone with an interest in names and their history.

The first and so far only Plant Geography of Chile was written about 100 years ago, since when many things have changed: plants have been renamed and reclassified; taxonomy and systematics have experienced deep changes as have biology, geography, and biogeography. The time is therefore ripe for a new look at Chile's plants and their distribution. Focusing on three key issues – botany/systematics, geography and biogeographical analysis – this book presents a thoroughly updated synthesis both of Chilean plant geography and of the different approaches to studying it. Because of its range – from the neotropics to the temperate sub-Antarctic – Chile's flora provides a critical insight into evolutionary patterns, particularly in relation to the distribution along the latitudinal profiles and the global geographical relationships of the country's genera. The consequences of these relations for the evolution of the Chilean Flora are discussed. This book will provide a valuable resource for both graduate students and researchers in botany, plant taxonomy and systematics, biogeography, evolutionary biology and plant conservation.

Sudden death is probably the greatest challenge facing modern cardiology today. This is mainly due to the impact of its brusque appearance and the socioeconomic implications. The incidence is presently decreasing somewhat, mainly due to the decline in new cases of ischemic heart disease on one hand, and to better prevention in risk patients on the other. Nevertheless, the figures are still high and represent over 300,000 patients per year in the United States alone. This book is an updating of the problem of sudden death from a multifactorial standpoint. It includes not only electrophysiologic data but also covers aspects ranging from epidemiology to prevention. Risk markers and triggering mechanisms of sudden death are reviewed, with special emphasis on the role of electrical instability, ischemia and depressed ventricular function. The book includes the contributions from many experts, often pioneers in their respective fields. It is our hope that the book serves as an updating for those cardiologists who are not specialized in these subjects, but may also be of interest to the expert. We wish to express our sincerest gratitude to the authors for sending in their work so promptly, and also Kluwer Academic Publishers for their exactitude and perfection in this edition.
