This book addresses major population and development issues: fertility and reproductive health, migrations, gender, education, poverty and inequalities. To that aim it revisits and considerably enlarges Kingsley Davis' 1963 theory of change and response, using interdisciplinary methodologies. On the basis of four decades of field research (1985-2015), it questions the rationality of the actors, how culture shapes socio-demographic behaviours, in a context of modernity and globalisation. More specifically, it casts new light on the interactions of individuals, families, networks and local communities with the State and its population policy.

Navigating the maze of modern American health care is rarely easy; those who enter it are confronted with a dizzying array of specialists, practitioners, and clinics from which to choose, and are forced to make decisions regarding drugs and treatments about which they may know very little. For immigrants, finding their way can be difficult--especially for those to whom Western medicine is itself unfamiliar. In this engaging, accessible, and detail-rich book, Zibin Guo narrates elderly Chinese immigrants' response to contemporary American medicine. Traditional Chinese medicine emphasizes self-care and the medicinal value of foods and herbs; American doctors' responses to the ailments of their Chinese patients can seem impersonal and unnecessarily interventionist. Distrust, expense, and problems of communication and interpretation often frustrate both patient and practitioner. Guo paints a picture of a population that, despite its outward appearance of homogeneity, demonstrates a surprisingly wide variety of health-care knowledge, practice, and belief. Using case materials and interviews, he analyzes the blend of folk treatments and respect for Western science that coexist in the health care regimens of these elderly Chinese immigrants.

Literature on the population dynamics of insect herbivores tends to favour a top-down regulation of abundance, owing much to the action of natural enemies. Originally published in 2005, this volume challenges this paradigm and argues that tree-dwelling species of aphids, through competition for resources, regulate their own abundance. The biology of tree-dwelling aphids is examined, particularly their adaptation to the seasonal development of their host plants. When host-plant quality is favourable, aphids, by telescoping generations, can achieve prodigious rates of increase which their natural enemies are unable to match. Using analyses of long-term population censuses and results of experiments, this book introduces students and research workers to insect herbivore-host dynamics using the interaction between aphids and trees as a model.

Systematic, practical, and accessible, this is the first book to focus on finding the most defensible design for a particular research question.

Thoughtful guidelines are provided for weighing the advantages and disadvantages of various methods, including qualitative, quantitative, and mixed methods designs. The book can be read sequentially or readers can dip into chapters on specific stages of research (basic design choices, selecting and sampling participants, addressing ethical issues) or data collection methods (surveys, interviews, experiments, observations, archival studies, and combined methods). Many chapter headings and subheadings are written as questions, helping readers quickly find the answers they need to make informed choices that will affect the later analysis and interpretation of their data. Useful features include: *Easy-to-navigate part and chapter structure. *Engaging research examples from a variety of fields. *End-of-chapter tables that summarize the main points covered. *Detailed suggestions for further reading at the end of each chapter. *Integration of data collection, sampling, and research ethics in one volume. *Comprehensive glossary.

This practical book sets out how to approach each stage of your research project, from choosing a research design and methodology to collecting and analysing data and communicating your results – and showcases best practice along the way. Packed with pragmatic guidance for tackling research in the real world, this fourth edition: Offers support for diving into a project using digital data, with how-to guidance on conducting online and social media research Empowers you to confidently disseminate your work and present with impact Helps you map out your research journey and put a plan in place with decision trees in every chapter Challenges you to be reflective and critical about the research you consume and undertake Zina O Leary's detailed and down-to-earth approach gives you the research skills and momentum you need to successfully complete your research project.

This text provides an analysis of how children come to be able to understand the dynamic nature of causality - how processes take place through time. The author studies the capabilities and limitations of 7-12 year old children in order to assess their conception of evolutionary processes. His study follows on from Piaget's work on causality, and is intended to contribute to the literature on "theory of mind" and children's scientific development. The book draws on experimental studies of diachronic thinking in children and adults, and discusses the importance of a well-developed diachronic perspective for cognition.

Learning activities for each textbook chapter review and reinforce key concepts and offer application to evidence-based clinical practice. Time-tested and innovative exercises promote in-depth learning with "Introductions, Key Terms "exercises," Key Ideas" exercises, " Making Connections" exercises, crossword puzzles," Exercises in Critical Appraisal, "and "Going Beyond" exercises. Hands-on practice with three published research studies allows you to apply your knowledge and gain practice in working with the kinds of articles you will use to build an evidence-based practice. Answer key for all activities lets you check your understanding and learn from your mistakes. An expanded focus on evidence-based practice and new case studies shows the value of understanding the research process and applying it for an evidence-based nursing practice. Three new full-text research articles serve as the basis for hands-on practice in each chapter. "

The increasing diversity of population of the United States presents many challenges to conducting health research that is representative and informative. Dispersion and accessibility issues can increase logistical costs; populations for which it is difficult to obtain adequate sample size are also likely to be expensive to study. Hence, even if it is technically feasible to study a small population, it may not be easy to

obtain the funding to do so. In order to address the issues associated with improving health research of small populations, the National Academies of Sciences, Engineering, and Medicine convened a workshop in January 2018. Participants considered ways of addressing the challenges of conducting epidemiological studies or intervention research with small population groups, including alternative study designs, innovative methodologies for data collection, and innovative statistical techniques for analysis.
