Becoming a citizen:Pope airman becomes an American after original application denied Biloxi-raised airman lived near Keesler Air Force Base, which led him to join the Air Force last year in June.

Tobacco, alcohol and gambling corporations have been highly effective in stalling, diverting and blocking public health measures. This book provides an original and engaging exposé of the ethical issues faced by people and organizations when they accept industry money in ways that facilitate corporate influence with the public and with policy makers. It starts with a detailed examination of the risks of accepting such profits and what might be done to reduce them, then moves on to introduce the concept of a continuum of 'moral jeopardy' which shifts the emphasis from accept/not accept binaries to a focus on the extent to which people are willing to accept funding. This shift encourages people to think and speak more about the risks and to develop clearer positions for themselves. The content will be helpful to those working in government agencies, addiction services, community organizations or anyone interested in reducing the harms of addictive consumption.

In Islam Is a Foreign Country, Zareena Grewal explores some of the most pressing debates about and among American Muslims: what does it mean to be Muslim and American? Who has the authority to speak for Islam and to lead the stunningly diverse population of American Muslims? Do their ties to the larger Muslim world undermine their efforts to make Islam an American religion? Offering rich insights into these questions and more, Grewal follows the journeys of American Muslim youth who travel in global, underground Islamic networks. Devoutly religious and often politically disaffected, these young men and women are in search of a home for themselves and their tradition. Through their stories, Grewal captures the multiple directions of the global flows of people, practices, and ideas that connect U.S. mosques to the Muslim world. By examining the tension between American Muslims' ambivalence toward the American mainstream and their desire to enter it, Grewal puts contemporary debates about Islam in the context of a long history of American racial and religious exclusions. Probing the competing obligations of American Muslims to the nation and to the umma (the global community of Muslim believers), Islam is a Foreign Country investigates the meaning of American citizenship and the place of Islam in a global age.

"What can we learn about the development of public interaction in e-democracy from a drama delivered by mobile headphones to an audience standing around a shopping center in a Stockholm suburb? In democratic societies there is widespread acknowledgment of the need to incorporate citizens' input in decision-making processes in more or less structured ways. But participatory decision making is balancing on the borders of inclusion, structure, precision and accuracy. To simply enable more participation will not yield enhanced democracy, and there is a clear need for more elaborated elicitation and decision analytical tools. This rigorous and thought-provoking volume draws on a stimulating variety of international case studies, from flood risk management in the Red River Delta of Vietnam, to the consideration of alternatives to gold mining in Roşia Montană in Transylvania, to the application of

multi-criteria decision analysis in evaluating the impact of e-learning opportunities at Uganda's Makerere University. Editors Love Ekenberg (senior research scholar, International Institute for Applied Systems Analysis [IIASA], Laxenburg, professor of Computer and Systems Sciences, Stockholm University), Karin Hansson (artist and research fellow, Department of Computer and Systems Sciences, Stockholm University), Mats Danielson (vice president and professor of Computer and Systems Sciences, Stockholm University, affiliate researcher, IIASA) and Göran Cars (professor of Societal Planning and Environment, Royal Institute of Technology, Stockholm) draw innovative collaborations between mathematics, social science, and the arts. They develop new problem formulations and solutions, with the aim of carrying decisions from agenda setting and problem awareness through to feasible courses of action by setting objectives, alternative generation, consequence assessments, and trade-off clarifications. As a result, this book is important new reading for decision makers in government, public administration and urban planning, as well as students and researchers in the fields of participatory democracy, urban planning, social policy, communication design, participatory art, decision theory, risk analysis and computer and systems sciences."--Publisher's website.

A definitive and authoritative guide to drugs and why we get high from the creator of the top-rated podcast, Say Why to Drugs. Drugs. We've all done them. Whether it's a cup of coffee or a glass of wine, a cigarette or a sleeping pill. But how well do we understand the effects of the drugs we take - legal or illegal? Say Why to Drugs investigates the science behind recreational drugs- debunking common myths and misconceptions, as well as containing the most recent scientific research. Looking at a range of drugs, this book provides a clear understanding of how drugs work and what they're really doing to your mind and body. Along the way you will find out why ketamine is on the WHO's list of essential medicines, why some researchers hope MDMA could treat PTSD, and much more. Enlightening, entertaining, and thought-provoking, Say Why to Drugs is a compelling read that will surprise and educate proponents on both sides of the drugs debate.

The US shale boom and efforts by other countries to exploit their shale resources could reshape energy and environmental landscapes across the world. But how might those landscapes change? Will countries with significant physical reserves try to exploit them? Will they protect or harm local communities and the global climate? Will the benefits be shared or retained by powerful interests? And how will these decisions be made? The Shale Dilemma brings together experts working at the forefront of shale gas issues on four continents to explain how countries reach their decisions on shale development. Using a common analytical framework, the authors identify both local factors and transnational patterns in the decision-making process. Eight case studies reveal the trade-offs each country makes as it decides whether to pursue, delay, or block development. Those outcomes in turn reflect the nature of a country's political process and the power of interest groups on both sides of the issue. The contributors also ask whether the economic arguments made by the shale industry and its government supporters have overshadowed the concerns of local communities for information on the effects of shale operations, and for tax policies and regulations to ensure broad-based economic development and environmental protection. As an informative and even-handed account, The Shale Dilemma recommends practical steps to help countries reach better, more transparent, and more far-sighted decisions.

Publishing Addiction Science is a comprehensive guide for addiction scientists facing the complex process of contributing to scholarly journals. Written by an international group of addiction journal editors and their colleagues, it discusses how to write research articles and systematic reviews, choose a journal, respond to reviewers' reports, become a reviewer, and resolve the often difficult authorship, ethical and citation issues that arise in addiction science publishing. As a "Guide for the Perplexed," Publishing Addiction Science helps novice as well as experienced researchers to deal with these challenges. It is suitable for university courses and forms the basis of the training workshops offered by the International Society of Addiction Journal Editors (ISAJE). Co-sponsored by ISAJE and the scientific journal Addiction, the third edition of Publishing Addiction Science gives special attention to the challenges faced by researchers from developing and non-English-speaking countries and features new chapters on guidance for clinician-scientists and the growth of infrastructure and career opportunities in addiction science.

How society's undervaluing of life puts all of us at risk--and the groundbreaking economic measure that can fix it Like it or not, sometimes we need to put a monetary value on people's lives. In the past, government agencies used the financial "cost of death" to monetize the mortality risks of regulatory policies, but this method vastly undervalued life. Pricing Lives tells the story of how the government came to adopt an altogether different approach--the value of a statistical life, or VSL--and persuasively shows how its more widespread use could create a safer and more equitable society for everyone. In the 1980s, W. Kip Viscusi used the method to demonstrate that the benefits of requiring businesses to label hazardous chemicals immensely outweighed the costs. VSL is the risk-reward trade-off that people make about their health when considering risky job choices. With it, Viscusi calculated how much more money workers would demand to take on hazardous jobs, boosting calculated benefits by an order of magnitude. His current estimate of the value of a statistical life is \$10 million. In this book, Viscusi provides a comprehensive look at all aspects of economic and policy efforts to price lives, including controversial topics such as whether older people's lives are worth less and richer people's lives are worth more. He explains why corporations need to abandon the misguided cost-of-death approach, how the courts can profit from increased application of VSL in assessing liability and setting damages, and how other countries consistently undervalue risks to life. Pricing Lives proposes sensible economic guideposts to foster more protective policies and greater levels of safety in the United States and throughout the world.

In what ways are cities central to the evolution of contemporary global capitalism? And in what ways is global capitalism forged by the urban experience? This book provides a response to these questions, exploring the multifaceted dimensions of the city-capitalism nexus. Drawing on a wide range of conceptual approaches, including political economy, neo-institutionalism and radical political theory, this insightful book examines the complex relationships between contemporary capitalist cities and key forces of our times, such as globalization and neoliberalism. Taking a truly global perspective, Ugo Rossi offers a comparative analysis of the ways in which urban economies and societies reflect and at the same time act as engines of global capitalism. Ultimately, this book shows how over the past three decades capitalism has shifted a gear - no longer merely incorporating key aspects of society into its system, but encompassing everything, including life itself - and illustrates how cities play a central role within this life-oriented construction of global capitalism.

North America is in the grips of a drug epidemic; with the introduction of fentanyl, the chances of a fatal overdose are greater than ever, prompting many to rethink the war on drugs. Public opinion has slowly begun to turn against prohibition, and policy-makers are finally beginning to look at addiction as a health issue as opposed to one for the criminal justice system. While deaths across the continent continue to climb, *Fighting for Space* explains the concept of harm reduction as a crucial component of a city's response to the drug crisis. It tells the story of a grassroots group of addicts in Vancouver's Downtown Eastside who waged a political street fight for two decades to transform how the city treats its most marginalized citizens. Over the past twenty-five years, this group of residents from Canada's poorest neighborhood organized themselves in response to the growing number of overdose deaths and demanded that addicts be given the same rights as any other citizen; against all odds, they eventually won. But just as their battle came to an end, fentanyl arrived and opioid deaths across North America reached an all-time high. The "genocide" in Vancouver finally sparked government action. Twenty years later, as the same pattern plays out in other cities, there is much that advocates for reform can learn from Vancouver's experience. *Fighting for Space* tells that story—including case studies in Ohio, Florida, New York, California, Massachusetts, and Washington state—with the same passionate fervor as the activists whose tireless work gave dignity to addicts and saved countless lives.

This electronic version has been made available under a Creative Commons (BY-NC) open access license. *Loud and proud* is an ethnographic study of grassroots activists in the English Defence League (EDL). Setting the findings within contemporary debates on race and racism, Islamophobia, social movements and the far right, the author draws on interviews, informal conversations and extensive observation at EDL events to explore and explain the gap between the public image of the movement as a violent Islamophobic and racist organisation and individual activists' understanding of it as 'one big family'. Presenting them neither as duped by a charismatic leader nor working class anti-heroes, this book introduces EDL activists as individuals with real lives whose diverse trajectories in and out of activism are embedded in personal life stories. The book will be of value to those researching or studying in the disciplines of sociology, political science and anthropology as well as those with an interest in contemporary political issues and the populist and radical right.
