multidimensional gas chromatography technique that was originally described in 1991 by Professor Phillips and his student Zaiyou Liu. GCxGC utilizes two different columns with two different stationary phases. In GCxGC, all of the effluent from the first dimension column is diverted to the second dimension column via a modulator.

Comprehensive two-dimensional gas chromatography - Wikipedia
GCxGC ("GC by GC"), also known as Comprehensive Two-Dimensional Gas Chromatography, is a powerful analytic technique that utilizes two columns of differing phase selectivity connected by a modulation device. The set-up of GCxGC improves peak capacity, resolution, and detectability.

GCxGC : Comprehensive Two-Dimensional Gas Chromatography ...
10.6.1 Two-Dimensional Gas Chromatography and Time-of-Flight Mass Spectrometry (GCXGC-TOFMS) An emerging analytical technique in environmental chemistry is comprehensive two-dimensional gas chromatography (GCXGC). This approach employs two columns in tandem to separate individual analytes. In contrast to conventional one-dimensional separation, GCXGC allows for a greater peak capacity (i.e., number of peaks that can be resolved within a given time) and greater separation of coeluting ...

Comprehensive two-dimensional gas chromatography, or GCxGC was created by Professor Phillips in 1991. From that date, it has extensively been applied to many kind of applications: fuel, forensics, food and flavour, environmental, metabolomics, biomarkers, and clinical. This revolutionary technique consists in subjecting the whole sample to two dimensions of separations.
