"Join Mark Drolsbaugh in his fascinating journey from hearing toddler...to hard of hearing child...to deaf adolescent... and ultimately, to culturally deaf adult. The struggle to find one's place in the deaf community is challenging, as Mark finds, yet there is one interesting twist: both his parents are also deaf. Even though the deaf community has always been there for him, right under his nose, Drolsbaugh takes the unbeaten path and goes on a zany, lifelong search... to become Deaf Again."--

researchers in the design and implementation of research in the field. As the volume progresses, contributing authors explore scientific research methodologies such as survey design, single case design, intervention design, secondary data analysis, and action research at large. In doing so, these chapters provide solid examples as to how the issues raised in the earlier groundwork of the book play out in diverse orientations within deaf education, including both quantitative and qualitative research approaches. Designed to help guide researchers from the germ of their idea through seeing their work publish, *Research in Deaf Education* offers readers a comprehensive understanding of the critical issues behind the decisions that go into this rigorous and important research for the community at hand.

The book is a unique collection of research on sign languages that have emerged in rural communities with a high incidence of, often hereditary, deafness. These sign languages represent the latest addition to the comparative investigation of languages in the gestural modality, and the book is the first compilation of a substantial number of different "village sign languages". Written by leading experts in the field, the volume uniquely combines anthropological and linguistic insights, looking at both the social dynamics and the linguistic structures in these village communities. The book includes primary data from eleven different signing communities across the world, including results from Jamaica, India, Turkey, Thailand, and Bali. All known village sign languages are endangered, usually because of pressure from larger urban sign languages, and some have died out already. Ironically, it is often the success of the larger sign language communities in urban centres, their recognition and subsequent spread, which leads to the endangerment of these small minority sign languages. The book addresses this specific type of language endangerment, documentation strategies, and other ethical issues pertaining to these sign languages on the basis of first-hand experiences by Deaf

This groundbreaking volume introduces readers to the key concepts and debates in deaf studies, offering perspectives on the relevance and richness of deaf ways of being in the world. In *Open Your Eyes*, leading and emerging scholars, the majority of whom are deaf, consider physical and cultural boundaries of deaf places and probe the complex intersections of deaf identities with gender, sexuality, disability, family, and race. Together, they explore the role of sensory perception in constructing community, redefine literacy in light of signed languages, and delve into the profound medical, social, and political dimensions of the disability label often assigned to deafness. Moving beyond proving the existence of deaf culture, *Open Your Eyes* shows how the culture contributes vital insights on issues of identity, language, and power, and, ultimately, challenges our culture's obsession with normalcy. More than 1.46 million people in the United States have hearing losses in sufficient severity to be considered deaf; another 21 million people have other hearing impairments. For many deaf and hard-of-hearing individuals, sign language and voice interpreting is essential to their participation in educational programs and their access to public and private services. However, there is less than

half the number of interpreters needed to meet the demand, interpreting quality is often variable, and there is a considerable lack of knowledge of factors that contribute to successful interpreting. Perhaps it is not surprising, then, that a study by the National Association of the Deaf (NAD) found that 70% of the deaf individuals are dissatisfied with interpreting quality. Because recent legislation in the United States and elsewhere has mandated access to educational, employment, and other contexts for deaf individuals and others with hearing disabilities, there is an increasing need for quality sign language interpreting. It is in education, however, that the need is most pressing, particularly because more than 75% of deaf students now attend regular schools (rather than schools for the deaf), where teachers and classmates are unable to sign for themselves. In the more than 100 interpreter training programs in the U.S. alone, there are a variety of educational models, but little empirical information on how to evaluate them or determine their appropriateness in different interpreting and interpreter education—covering what we know, what we do not know, and what we should know. Several volumes have covered interpreting and interpreter education, there are even some published dissertations that have included a single research study, and a few books have attempted to offer methods for professional interpreters or interpreter educators with nods to existing research. This is the first volume that synthesizes existing work and provides a coherent picture of the field as a whole, including evaluation of the extent to which current practices are supported by validating research. It will be the first comprehensive source, suitable as both a reference book and a textbook for interpreter training programs and a variety of courses on bilingual education, psycholinguistics and translation, and cross-linguistic studies.

nineteenth-century schools for the deaf, with their denigration of sign language and their insistence on oralist teaching, shaped the lives of deaf people for generations to come. They describe how deaf culture and art thrived in mid-twentieth century deaf clubs and deaf theatre, and profile controversial contemporary technologies." Cf. Publisher's description.
