The endocrine system is a diffuse system, scattered throughout the body. It is composed of numerous organs that serve strictly an endocrine function (i.e., secretion of hormones) and many endocrine tissues or cells that are part of larger organs. All endocrine organs and

tissues are glands
that are ductless.

If endocrine glands are not functioning properly the body can be out of homeostasis and a patient may be diagnosed with an endocrine system disease or disorder (Figure 1). In today's lab, you will be using your knowledge of the endocrine system and various hormones to

Get Free Endocrine

diagnose patients.

The objectives of today's lab are to identify the main human endocrine glands, diagnose "patients" with endocrine diseases based on their symptoms, and write a case study for another endocrine disease.
