In modern figure drawing, the basic unit of measurement is the 'head', which is the distance from the top of the head to the chin. This unit of measurement is credited to the Greek sculptor Polykleitos (fifth century BCE) and has long been used by artists to establish the proportions of the human figure.

This guide to the proportions of the human form is a reformatted reproduction of the famous but hard to find work by Johann Gottfried Schadow. It includes images of plates engraved by John Sutcliffe from the English translation, and images of the original German plates. The original was a huge book, each plate was 24" by 19" for this version the large plates were photographed to reproduce them on a single page, but also reproduced in sections so they can be seen as large as possible. It includes an introduction, a history of the study of human proportion and a description of the plates plus the original German plates reproduced on single pages. Schadow based his work on the pioneering work of the Greek Sculptor Polykletus who both wrote a treatise on human proportion and sculpted a figure to illustrate his work. Polykletus was among the creators of classical Greek sculpture, famous for his naturalism.

Excellent line drawings and annotations of anatomical structure provide the beginning artist with just about everything one needs to know about drawing all parts of the human anatomy. 179 black-and-white illustrations.

The author "teaches beginning artists how to draw the human figure, from stick figure to anatomically accurate person, in clear, easy-to-follow lessons. More than just a reference, this book provides the step-by-step instruction to teach you to draw the human figure and the anatomical knowledge to draw it realistically."--page [4] of cover.

"A book of fundamentals for an artistic career"--Jkt.

This drawing tutorial from best-selling author Christopher Hart shows artists how to draw exaggerated musculature of super-sized figures in action poses.

In this innovative guide, master art instructor William Maughan demonstrates how to create a realistic human likeness by using the classic and highly accurate modeling technique of chiaroscuro (Italian for "light and dark") developed by Leonardo da Vinci during the High Renaissance. Maughan first introduces readers to the basics of this centuries-old technique, showing how to analyze form, light, and shadow; use dark pencil, white pencil, and toned paper to create a full range of values; use the elements of design to enhance a likeness; and capture a sitter's gestures and proportions. He then demonstrates, step by step, how to draw each facial feature, develop visual awareness, and render the head in color with soft pastels.

Simple methods teach how to draw figures. When we try to draw a person, we are quickly confronted with various challenges. The proportions need to be correct, the attitude must be clear and vivid, the face should

show resemblance and also be expressive. Such a task takes courage. Yet a little practice and training quickly lead to the ability to draw figures in a wide variety of styles. A figure in a particular posture can be assembled with a few key characteristic strokes. At the center of this collection is not the perfect figure, but the joy of drawing, and how, with simple methods, drawing people is possible: by reducing and reducing to a few lines, using clear contours and simple surfaces, the human figure emerges, constructed and elaborated.

"I am particularly pleased that the author addresses CHARACTER so heavily in her presentation of material. That is, after all, what plays are about." Madeline Ann Kozlowski, Emmy Award winning Costume Designer, Professor of Costume Design, UCI
