PROBLEM 6 X , Y and Z are positive integers such that $X^2 + Y^2 + Z^2 = 390$. What is the value of $X + Y + Z$? Find all possible solutions. SOLUTION 6 Since $20^2 = 400$ and $X^2 + Y^2 + Z^2 = 390 < 400$, we see that $X < 20$, $Y < 20$ and $Z < 20$. 1 Set up a spreadsheet with 1 to 19 down a column (X) and across a row (Y). In each cell, calculate $\sqrt{390 - X^2 - Y^2}$. Look for integer values.

Gauss was about 9 years old -- already a super genius (much like Wile E. Coyote.) His teacher hated math and hated Gauss (because he was so smart). As usual, the teacher walked into the class and gave them a horribly tedious arithmetic problem. They were to work on it and not bother him. Here was the day's problem: Add the integers from 1 to 100.

Solving Gauss's problem also involves looking for structure, either by making "pairs" ($1+100=2+99=3+98=\dots=50+51$), or by creating a second copy of the sum to make 100 101's. In the past, some students have computed
