Financial market behavior and key trading strategies—illuminated by interviews with top hedge fund experts Efficiently Inefficient describes the key trading strategies used by hedge funds and demystifies the secret world of active investing. Leading financial economist Lasse Heje Pedersen combines the latest research with real-world examples to show how certain tactics make money—and why they sometimes don't. He explores equity strategies, macro strategies, and arbitrage strategies, and fundamental tools for portfolio choice, risk management, equity valuation, and yield curve trading. The book also features interviews with leading hedge fund managers: Lee Ainslie, Cliff Asness, Jim Chanos, Ken Griffin, David Harding, John Paulson, Myron Scholes, and George Soros. Efficiently Inefficient reveals how financial markets really work.

The absolute and relative performance of various asset classes is systematically related to macroeconomic trends. In this new book, Robert McGee provides a thorough guide to each stage of the business cycle and analyzes the investment implications using real-world examples linking economic dynamics to investment results.

'The Next Perfect Trade' articulates a set of principles that can be applied in discovering superior trades; those that will be profitable in the broadest range of economic scenarios. The book shifts focus from forces that drive markets to forces that drive successful trades. The robust performance of this approach has inspired the subtitle 'A Magic Sword of Necessity'. If you think of investing as a rigorous intellectual battle, you need to prepare for it thoroughly. Get in proper shape. Learn your moves, acquire your armor, your shield, your helmet and your battle horse. A magic weapon will be wasted if you get killed by the market's first arrow. Every chapter in this book represents a step towards mastering the sword of necessity. Taking each of those steps has its own merit. Both aspiring and experienced investors can find value in this book long before the advanced concepts, such as "necessity" and "dominance," are fully introduced. And with complete training and equipment, this weapon may give you a devastating advantage.

As western governments issue increasing amounts of debt, the fixed income markets have never been more important. Yet the methods for analyzing these markets have failed to keep pace with recent developments, including the deterioration in the credit quality of many sovereign issuers. In Fixed Income Relative Value Analysis, Doug Huggins and Christian Schaller address this gap with a set of analytic tools for assessing value in the markets for government bonds, interest rate swaps, and related basis swaps, as well as associated futures and options. Taking a practitioner's point of view, the book presents the theory behind market analysis in connection with tools for finding and expressing trade ideas. The extensive use of actual market examples illustrates the ways these analytic tools can be applied in practice. The book covers: Statistical models for quantitative market analysis, in particular mean reversion models and principal component analysis. An in-depth approach to understanding swap spreads in theory and in practice. A comprehensive discussion of the various basis swaps and their combinations. The incorporation of credit default swaps in yield curve analysis. A classification of option trades, with appropriate analysis tools for each category. Fitted curve techniques for identifying relative value among different bonds. A multi-factor delivery option model for bond future contracts. Fixed Income Relative Value Analysis provides an insightful presentation of the relevant statistical and financial theories, a detailed set of statistical and financial tools derived from these theories, and a multitude of actual trades resulting from the application of these tools to the fixed income markets. As such, it's an indispensable guide for relative value analysts, relative value traders, and portfolio managers for whom security selection and hedging are part of the investment process.
