Aerospace engineering is the study of the design, development, and production of air and spacecraft. This engineering discipline is often divided between those who pursue careers on the aeronautical side and those working on space craft.

Engineer a bright future for yourself! You've worked hard for that engineering degree. Now what? Sometimes the choice of careers can seem endless; the most difficult part of a job search is narrowing down your options. Great Jobs for Engineering Majors will help you choose the right career out of the myriad possibilities at your disposal. It provides detailed profiles of careers in your field along with the basic skills necessary to begin a focused job search. You'll soon be on the fast track to landing a job that satisfies your personal, professional, and practical needs. Great Jobs for Engineering Majors will help you: Determine the occupation that's best suited for you Craft a résumé and cover letter that stand out from the rest Learn from practicing professionals about everyday life on the job Become familiar with current statistics on salaries and trends within the profession Go from engineering major to: System operator * research engineer * naval architect * data mining analyst *chemical engineer * electrical engineering professor * technical representative

Answers the question, "What can I do with an engineering degree?" Great Jobs for Engineering Majors helps you explore your career options within your field of study. From assessing your talents and skills to taking the necessary steps to land a job, every aspect of identifying and getting started in engineering is covered. You learn to explore your options, target an ideal career, present a major as an asset to a job, perfect a job search, and follow through and get results.

Engineering skills and knowledge are foundational to technological innovation and development that drive long-term economic growth and help solve societal challenges. Therefore, to ensure national competitiveness and quality of life it is important to understand and to continuously adapt and improve the educational and career pathways of engineers in the United States. To gather this understanding it is necessary to study the people with the engineering skills and knowledge as well as the evolving system of institutions, policies, markets, people, and other resources that together prepare, deploy, and replenish the nation's engineering workforce. This report explores the characteristics and career choices of engineering graduates, particularly those with a BS or MS degree, who constitute the vast majority of degreed engineers, as well as the characteristics of those with non-engineering degrees who are employed as engineers in the United States. It provides insight into their educational and career pathways and related decision making, the forces that influence their decisions, and the implications for major elements of engineering education-to-workforce pathways.

Despite decades of government, university, and employer efforts to close the gender gap in engineering, women make up only 11 percent of practicing engineers in the United States. What factors influence women graduates' decisions to enter the engineering workforce and either to stay in or leave the field as their careers progress? Researchers are both tapping existing data and fielding new surveys to help answer these questions. On April 24, 2013, the National Research Council Committee on Women in Science, Engineering, and Medicine held a workshop to explore emerging research and to discuss career pathways and outcomes for women who have received bachelor's degrees in engineering. Participants included academic researchers and representatives from the Department of Labor, National Science Foundation, and Census Bureau, as well as several engineering professional societies. Career Choices of Female Engineers summarizes the presentations and discussions of the workshop.

Provides information about jobs for engineering majors. Gives job searching techniques and possible career paths in industry, consulting, government, and education.
