The VETOMAC-X Conference covered a holistic plethora of relevant topics in vibration and engineering technology including condition monitoring, machinery and structural dynamics, rotor dynamics, experimental techniques, finite element model updating, industrial case studies, vibration control and energy harvesting, and signal processing. These proceedings contain not only all of the nearly one-hundred peer-reviewed presentations from authors representing more than twenty countries, but also include six invited lectures from renowned experts: Professor K. Gupta, Mr W. Hahn, Professor A.W. Lees, Professor John Mottershead, Professor J.S. Rao, and Dr P. Russhard. This work is of interest to researchers and practitioners alike, and is an essential book for most of libraries of higher academic institutes.

Volume 2 of the two-volume set Advanced direct injection combustion engine technologies and development investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emission legislation worldwide. Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications. Two exclusive sections examine light-duty and heavy-duty diesel engines. Fuel injection systems and after treatment systems for DI diesel engines are discussed. The final section addresses exhaust emission control strategies, including combustion diagnostics and modelling, drawing on reputable diesel combustion system research and development. Investigates how HSDI and DI engines can meet ever more stringent emission legislation Examines technologies for both light-duty and heavy-duty diesel engines Discusses exhaust emission control strategies, combustion diagnostics and modelling

The Land Speed Record is a fascinating story of human endeavour – of man and machine battling time to be the fastest. Since 1898 many have dreamed of being the fastest on earth, first with electric, then steam, then petrol, moving forward to the jet car, and into the present and future with rocket power. The glory years of the record are studded with iconic names such as Malcolm and Donald Campbell, Henry Segrave, John Cobb, George Eyston, and more recently Craig Breedlove and Richard Noble. The next race is on for 1,000mph with the latest British attempt by Bloodhound SSC. In this colourfully illustrated introduction, using many photographs from the Motoring Picture Library at Beaulieu, Malcolm Campbell's grandson tells of the brave drivers and powerful machines that have propelled themselves into the record books.

Following the publication of Tall But True Tractor Tales the author has unearthed 50 more stories related to tractors and farm machines (more tall but true tales) and those who work with them. Most of the individuals whose mishaps and misadventures with machinery appear in this book have agreed to allow the world to share and laugh at their misfortune. The author has responded to the challenge of illustrating these events with cartoons and photographs.

Buckle your seat belt and get ready for an action-packed race through the world of automobiles! Car Crazy is an exhilarating celebration of the motor vehicle in all its weird and wonderful glory. Prepare to be dazzled by the fastest, the loudest, the most beautiful, the most powerful, the most expensive, and the most outrageous vehicles ever to hit the tarmac. More than just a beautiful book of pictures and facts, Car Crazy also tells the amazing human-interest stories behind the greatest racing drivers and stuntmen. Marvel at the death-defying bravery of Evel Knievel and Ayrton Senna and find out how scientists and designers changed the shape of the car forever in their quest for perfect aerodynamics.

At the Bonneville Salt Flats on August 23, 2006 the fastest man on earth, Andy Green, sped to 350.092mph in a yellow torpedo-shaped car called JCB Dieselmex, creating a sensational new land speed record for a diesel-powered vehicle. This was the culmination of one of the most remarkable and adventurous projects in British motorsport history. The endeavor began with JCB Chairman Sir Anthony Bamford's bold decision to use his company's JCB444 diesel engine - normally used in diggers - as the basis for a record-breaking car, in order to showcase his products on a world stage. This book tells the whole dramatic story from the inside.
