"Learn Oracle8i" is a comprehensive guide covering all of the features of the newest release of the Oracle database. Author Josi A. Ramalho begins with an overview of the Oracle database, including its structure and components, and introduces the basics of database programming. Readers learn to create and maintain tables, use indexes and sequences, restrict access to tables using privileges and roles, and implement constraints and triggers to ensure data integrity. In addition, the main commands of SQL structured query language are introduced, and PL/SQL, Oracle's extension to SQL, is covered in detail, including its stored procedures and functions, packages, triggers, cursors, and

transactions. Readers also learn about SQL*Plus, a tool for working with SQL commands and configuring PL/SQL commands. Advanced topics include distributed processing, data replication, Oracle utilities, and publishing databases to the Internet. Josi A. Ramalho is considered to be one of the world's foremost authorities and journalists on database technology. He is the best-selling computer book author in Brazil, and a columnist for the Brazilian newspaper Folha de Sco Paulo. He has written more than 70 computer books in Portuguese, English, and Spanish, including "Learn Personal Oracle 8.0 with Power Objects 2.0" (1-55622-546-6), "Learn SQL" (1-55622-661-6), and "Learn Microsoft SQL Server" (1-55622-639-X).

business, government, and academic markets. However, as with all operating systems, the number of factors that can influence its performance is virtually unlimited. Author Gilbert Held uses his experience in constructing, configuring, and operating a number of Web-based Windows NT servers that receive millions of hits per week to explain to networking professionals how to test and troubleshoot computer problems. This book focuses on three critical Microsoft Windows NT server areas: the server itself, the local area network, and the wide area network. The first section of the book provides information detailing the basics of the server, how to examine its operation, and a number of techniques to boost the productivity of operating an NT system. Beginning with an overview of Ethernet and TCP/IP, chapters in the second section cover the operation of Microsoft's

Network Monitor, Triticom's EtherVision, and Cinco Systems' WebXRay. In the third section, the focus is placed upon the wide area network used to interconnect LANs. Chapters in this section introduce the reader to basic transmission measurements, channel and circuit parameters, and other topics necessary to understand how to test and troubleshoot the WAN connection.

"CORBA Networking with Java" is a practical, hands-on approach for network administrators who want to know the day-to-day pitfalls and problems of integrating a CORBA network with Java. The CD-ROM contains an Intranet fundamentals course.
