The most successful Lister engine was the D-type engine, introduced from 1931, most versions of which were rated at 1.5 horsepower at 700 RPM. More than 250,000 'D' engines were built until 1964. They were used for a wide variety of light tasks such as pumping and small-scale electricity generation.

The versatile engine was used a prime mover to drive all kinds of machinery, working either from a fixed stationary position or as a portable- a trolley or truck was used to transport it to a location where an appliance needed power. They were available in all sizes, from diminutive models used for home-workshop tasks, to large-scale engines for driving agricultural or industrial machinery. David W. Edgington explores the many types and styles of old engine, describing their development from early steam and gas driven examples through to later versions fuelled by petrol, paraffin and diesel. Colour photographs and archive illustrations depict engines produced by well-known manufacturers such as the Associated Manufacturer's Company, Lister, Petter, and Wolseley, and those of lesser-known markers such as Morton and Naylor. This is the ideal introduction to these fascinating machines.

This book considers the evolution of medical education over the centuries, presents various theories and principles of learning (pedagogical and andragogical) and discusses different forms of medical curriculum and the strategies employed to develop them, citing examples from medical schools in developed and developing nations. Instructional methodologies and tools for assessment and evaluation are discussed at length and additional elements of modern medical teaching, such as writing skills, communication skills, evidence-based medicine, medical ethics, skill labs and webinars, are fully considered. In discussing these topics, the authors draw upon the personal experience that they have gained in learning, teaching and disseminating knowledge in many parts of the world over the past four decades. Medical Education in Modern Times will be of interest for medical students, doctors, teachers, nurses, paramedics and health and education planners.
