Sustainable Water Resources Management 2021

CIWEM ' s 2018 position on planning water resources recommends " Adoption of a ' security through diversity ' approach to managing water resources " : " CIWEM advocates a strong commitment to the twin-track approach, moving towards a more formalised ' security through diversity ' approach.

Current and future challenges for water resources management

Water resource management is the activity of planning, developing, distributing and managing the optimum use of water resources. It is a sub-set of water cycle management. Ideally, water resource management planning has regard to all the competing demands for water and seeks to allocate water on an equitable basis to satisfy all uses and demands. As with other resource management, this is rarely possible in practice. Water is an essential resource for all life on the planet.

Water Resources Management | Home

At least every five years we prepare a Water Resources Management Plan, which sets out in detail how we plan to achieve these outcomes over the next 25 years. In particular we need to ensure we are able to maintain a surplus of supply, known as headroom, over the expected demand for water. In compiling the plan we have taken into account all the factors that will influence the balance of supply and demand for water.
