Fuel Test: Check for proper fuel pressure at the fuel rail per service manual. On Laser EFI motors check that the low-pressure pump is pumping to the VST. Ohm Test the Air Temperature Sensor. Test and adjust the TPS (not needed with the ACU). Inspect the MAP sensor hose for kinks, tears, clogs, or trapped fluid.

Mercury ECU/ACU/PCU Rough Idle Diagnostics

It is best to add the stabilizer and fuel treatment to the tank at the recommended dosage, run the engine for 10 minutes to allow the system to be cleaned, shut off the fuel valve to interrupt the fuel supply and allow the engine to run until it stops, and top off the tank until it ' s full to reduce the amount of exchange with the air that might bring in condensation.

Frequently Asked Questions | Mercury Marine

A failed Mercury Optimax air compressor will send debris to the air injectors. This debris can limit the operation of these injectors and cause all kind of performance issue. It is therefore recommended that you have the Optimax air and fuel injectors at least flow tested and if needed cleaned in the event of an air compressor failure.
