"Invisible Influence is a masterpiece in understanding the science of influence and how to take it from convincing to compelling. Kevin Hogan shows you in plain English how to understand, apply, and master the science of persuasion. The book is brilliant— and you can be brilliantly persuasive. Buy the book, read the book, and implement the book." —Jeffrey Gitomer, author of The Sales Bible and The Little Book of Leadership "One eyebrow-raising, head-whacking, forehead-slapping technique after another. Anyone whose daily life depends on influencing people—in other words, everyone—should read this book. Buy copies for your friends and hide it from your enemies." —Richard Brodie, author of Virus of the Mind: The New Science of the Meme "Master persuaders know that it's not really about the words you use or the moves you make—other people get persuaded because of what you think and how you feel. Kevin Hogan explains in delightfully clear detail how to make these master-persuader secrets work for you. Not only that, he also explains why all of this works, and he shows you the exact scientific research that proves it!" —David Garfinkel, author of Advertising Headlines That Make You Rich "Invisible Influence is a masterpiece. It will be the master influencer's reference book for the years to come. Invisible influence is like oxygen, you can't see it, but your life depends on it. In this book, you will discover the persuasion tactics that will compel your clients to say yes to you—again and again." —Roberto Monaco, www.influenceology.com "Dump the script—it's old news before the ink's dry. Trust yourself and use your new understanding of the ever-changing context to succeed. In his fascinating book, Hogan weaves established research findings into a handbook for successful influence. The guidelines are obvious but hidden, simple but profound. Understand them and you've mastered the complex and crucial art of persuasion." —William D. Crano, author of The Rules of Influence: Winning When You're in the Minority "Many write on the topic of persuasion. Precious few genuinely understand it. Kevin is one of those precious few. Read everything you can by him." —Mark Joyner, founder and CEO of Simpleology, www.simpleology.com

Natural Language Processing with TensorFlow brings TensorFlow and NLP together to give you invaluable tools to work with the immense volume of unstructured data in today ' s data streams, and apply these tools to specific NLP tasks. Thushan Ganegedara starts by giving you a grounding in NLP and TensorFlow basics. You'll then learn how to use Word2vec, including advanced extensions, to create word embeddings that turn sequences of words into vectors accessible to deep learning algorithms. Chapters on classical deep learning algorithms, like convolutional neural networks (CNN) and recurrent neural networks (RNN), demonstrate important NLP tasks as sentence classification and language generation. You will learn how to apply high-performance RNN models, like long short-term memory (LSTM) cells, to NLP tasks. You will also explore neural machine translation and implement a neural machine translator. After reading this book, you will gain an understanding of NLP and you'll have the skills to apply TensorFlow in deep learning NLP applications, and how to perform specific NLP tasks. What you will learn Core concepts of NLP and various approaches to natural language processing How to solve NLP tasks by applying TensorFlow functions to create neural networks Strategies to process large amounts of data into word representations that can be used by deep learning applications Techniques for performing sentence classification and language generation using CNNs and RNNs About employing state-of-the-art advanced RNNs, like long short-term memory, to solve complex text generation tasks How to write automatic translation programs and implement an actual neural machine translator from scratch The trends and innovations that are paving the future in NLP Who this book is for This book is for Python developers with a strong interest in deep learning, who want to learn how to leverage TensorFlow to simplify NLP tasks. The past decade has seen a revolution in the field of spoken dialogue systems. As in other areas of Computer Science and Artificial Intelligence, data-driven methods are now being used to drive new methodologies for system development and evaluation. This book is a unique contribution to that ongoing change. A new methodology for developing spoken dialogue systems is described in detail. The journey starts and ends with human behaviour in interaction, and explores methods for learning from the data, for building simulation environments for training and testing systems, and for evaluating the results. The detailed material covers: Spoken and Multimodal dialogue systems, Wizard-of-Oz data collection, User Simulation methods, Reinforcement Learning, and Evaluation methodologies. The book is a research guide for students and researchers with a background in Computer Science, AI, or Machine Learning. It navigates through a detailed case study in data-driven methods for development and evaluation of spoken dialogue systems. Common challenges associated with this approach are discussed and example solutions are provided. This work provides insights, lessons, and inspiration for future research and development – not only for spoken dialogue systems in particular, but for data-driven approaches to human-machine interaction in general.
