Nonlinear Control Systems and Power System Dynamics ...

Digital systems can handle nonlinear control systems more effectively than the analog type of systems. Power requirement in case of a discrete or digital system is less as compared to analog systems. Digital system has a higher rate of accuracy and can perform various complex computations easily as compared to analog systems.

electrical power systems using two nonlinear control synthesis techniques. For this transient stabilization problem the actuator considered is a power electronic device, a controllable series capacitor (CSC). The power system is described using two different nonlinear models - the second order swing equation and the third order flux-decay model.

those, which do not follow the principle of superposition. Nonlinearities in process variables can be caused by stiction in control valves, which, in turn, sets up oscillations that propagate throughout the whole plant.

Nonlinear System - an overview | ScienceDirect Topics

An adaptive system for linear systems with unknown parameters is a nonlinear system. The analysis of such adaptive systems requires similar techniques to analyse nonlinear systems. Therefore it is natural to treat adaptive control as a part of nonlinear control systems. Nonlinear and Adaptive Control Systems treats nonlinear control and adaptive control in a unified framework, presenting the

Nonlinear Control in Robotics - Bristol Robotics Laboratory

A survey of nonlinear system identification algorithms and related topics is presented by extracting significant results from the literature and presenting these in an organised and systematic way. Algorithms based on the functional expansions of Wiener and Volterra, the identification of block-oriented and bilinear systems, the selection of input signals, structure detection, parameter ...

Abstract. In the previous chapter, the control design principle and algorithm for SISO affine nonlinear systems are elaborated. This type of systems has only one input, i.e. control variable u and one output $y(t)$. As we know, however, multi-machine power systems are large nonlinear ones with multiple inputs and multiple outputs (MIMO).
