If our goal is Education for Knowing, as the title says, then we need to be guided by a conception of what knowing is. For example, we can all agree that there are “ math facts ” that students need to learn, and we can agree that there are general concepts and laws that students should be acquainted with. But is there more involved, perhaps something like nurturing in students a desire to probe deeper into the workings of things? Or developing a capacity to explain why things work the way they do? Our conceptions of what genuine knowing is serve as guides to what we think the goal of education is, and they tell us how to “ build a student. ” However, as it turns out, there are multiple conceptions of what knowing truly involves, and these conceptions tend to be different for different sets of education stakeholders such as parents and their children, school administrators, and educational researchers. Understanding this diversity of conceptions of knowing will make it easier for representatives of the different stakeholder groups to work together to accomplish the goal of building knowing students.

A new translation of Voltaire's Treatise on Toleration, one of the most important essays on religious tolerance and freedom of thought A powerful, impassioned case for the values of freedom of conscience and religious tolerance, Treatise on Toleration was written after the Toulouse merchant Jean Calas was falsely accused of murdering his son and executed on the wheel in 1762. As it became clear that Calas had been persecuted by 'an irrational mob' for being a Protestant, the Enlightenment philosopher Voltaire began a campaign to vindicate him and his family. The resulting work, a screed against fanaticism and a plea for understanding, is as fresh and urgent today as when it was written.

A few years ago, a book of this type and style could not or would not have been written. This is because, until a few years ago, no real in-depth knowledge of computers and computerized equipment was at the disposal of those with a non-science, non-quantitative background. Some people from other disciplines—including business, the arts, and the social sciences—had been working with such equipment, but they had “gone over” and tended to be even more computer-conscious than those whom they served. It is only comparatively recently that people like Elisabeth Gerver with a firm arts and adult education background first of all became knowledgeable and then remained true to that background. To her eternal credit, Elisabeth Gerver, when she became involved, avoided being sucked into the world of the jargon or even that of the thinking of the computer scientists and the electronic engineers. On the contrary, she insisted that she was an educated woman dealing with other educated people, and that they would all speak in the language of everyday discourse. It worked! One consequence of her experience and her thought is this remarkably lucid and readable book. It will prove to be of immense value to many in the world of adult and community education. But the beneficiaries will run beyond those sectors of society. Other people with a non-science, non-quantitative background will surely find it of immense value in their early, inevitably hesitant and faulty, grappling with the world of new technology.

Written around 380 BC, The Republic work is an important contribution to the age old question of how to best structure a society in a just way. Presented in the form of a dialogue between Socrates and three different interlocutors, it is an enquiry into the notion of a perfect community and the ideal individual within it. It is considered Plato's best-known work and has proven to be one of the most intellectually and historically influential works of philosophy and political theory. One of the most important books ever written on the subject of philosophy and political theory. An essential read for any student of philosophy or political science.
