PostgreSQL is an available database provider which is more powerful and performant than SQLite. You must provide your own Postgres server which will likely be a separate box from your RStudio Connect server (but not required). We currently support any 9.x version greater than or equal to 9.5, as well as 10, 11, 12, and 13.

PostgreSQL Administration. The PostgreSQL administration covers the most important PostgreSQL database server administration activities. Section 1. Managing Databases. In this section, you will learn how to manage databases in PostgreSQL including creating databases, modifying existing database features, and deleting databases.

PostgreSQL Administration
PostgreSQL is a powerful, open source object-relational database system. A database administrator's (DBA) primary job is to ensure that data is available, protected from loss and corruption, and easily accessible as needed. The PostgreSQL administration covers some of the most important PostgreSQL database server administration activities.

PostgreSQL Database Administration (DBA) for Beginners ¦ Udemy
As with everything that contains valuable data, PostgreSQL databases should be backed up regularly. While the procedure is essentially simple, it is important to have a clear understanding of the underlying techniques and assumptions. There are three fundamentally different approaches to backing up PostgreSQL data:
