Primates And Philosophers How Morality

Primates and Philosophers tackles this question by exploring the biological foundations of one of humanity's most valued traits: morality. In this provocative book, primatologist Frans de Waal argues that modern-day evolutionary biology takes far too dim a view of the natural world, emphasizing our "selfish" genes.

Based on the Tanner Lectures de Waal delivered at Princeton University's Center for Human Values in 2004, Primates and Philosophers includes responses by the philosophers Peter Singer, Christine M. Korsgaard, and Philip Kitcher and the science writer Robert Wright. They press de Waal to clarify the differences between humans and other animals, yielding a lively debate that will fascinate all those who wonder about the origins and reach of human goodness.

Seeking the origin of human morality not in evolution but in human culture, science insists that we are moral by choice, not by nature. Citing remarkable evidence based on his extensive research of primate behavior, de Waal attacks "Veneer Theory," which posits morality as a thin overlay on an otherwise nasty nature.

Primates and Philosophers: How Morality Evolved (Princeton Science Library) Frans de Waal, Stephen Macedo, Josiah Ober. For me the most interesting part are the experiments with apes and monkeys and the examples of their behaviour, that proof the continuity between human morality and animal conduct. I find less interesting the philosophical part. A good start point for a more thorough research.

In Primates and Philosophers, De Waal uses several accounts of primate behavior to show that morality is as continuous with other Great Apes, Chimpanzees and Bonobos in particular, as is our genome. It turns out these primates most close to us genetically, show a myriad of the building blocks for morality.
