The designer of a computer system must ensure that an adversary cannot breach the security of the system in any way. Furthermore, the designer must make it difficult for an adversary to side-step the security mechanism; one of the simplest ways for an adversary to steal confidential information is to bribe someone on the inside.

Most computer systems are built using a handful of such abstractions. The text describes how these abstractions are implemented, demonstrates how they are used in different systems, and prepares the reader to apply them in future designs. Features: Concepts of computer system design guided by fundamental principles (see list on inside cover).

Happy Friday, CS110 Family! I've published an Assignment 3 Redux right here. We'll be releasing Assignment 3 grades this coming weekened, but I figured the sooner you read an assign3 postmortem, the better Assignment 4 development will go.. Also, a former student of mine built this. It's an interview prep platform, but it focuses primarily on machine learning and artificial intelligence.
