This book presents a blueprint for researchers in the area of nanotechnology for chemical defense, especially with regard to future research on detection and protection. It addresses the synthesis of complex nanomaterials with potential applications in a broad range of sensing systems. Above all, it discusses novel experimental and theoretical tools for characterizing and modeling nanostructures and their integration in complex systems. The book also includes electronic structure calculations exploring the atomic and quantum mechanical mechanisms behind molecular binding and identification, so as to provide readers with an in-depth understanding of the capabilities and limitations of various nanomaterial approaches. Gathering contributions by scientists with diverse backgrounds, the book offers a wealth of insightful information for all scientists whose work involves material science and its applications in sensing.

Virtual private networks (VPNs) based on the Internet instead of the traditional leased lines offer organizations of all sizes the promise of a low-cost, secure electronic network. However, using the Internet to

carry sensitive information can present serious privacy and security problems. By explaining how VPNs actually work, networking expert Jon Snader shows software engineers and network administrators how to use tunneling, authentication, and encryption to create safe, effective VPNs for any environment. Using an example-driven approach, *VPNs Illustrated* explores how tunnels and VPNs function by observing their behavior "on the wire." By learning to read and interpret various network traces, such as those produced by `tcpdump`, readers will be able to better understand and troubleshoot VPN and network behavior. Specific topics covered include: Block and stream symmetric ciphers, such as AES and RC4; and asymmetric ciphers, such as RSA and ElGamal Message authentication codes, including HMACs Tunneling technologies based on `gtnet` SSL protocol for building network-to-network VPNs SSH protocols as drop-in replacements for `telnet`, `ftp`, and the BSD `r`-commands Lightweight VPNs, including `VTun`, `CIPE`, `tinc`, and `OpenVPN` IPsec, including its Authentication Header (AH) protocol, Encapsulating Security Payload (ESP), and IKE (the key management protocol) Packed with details, the text can be used as a handbook describing the functions of the protocols and the message formats that they use. Source code is available for download, and an appendix covers publicly available software that can be used to build tunnels and analyze traffic flow. *VPNs Illustrated* gives you the knowledge of tunneling and VPN technology you need to understand existing VPN implementations and successfully create your own.

At the Prague Summit in 2002, NATO Heads of State announced the creation of the NATO Response Force (NRF), a relatively small expeditionary force for spearhead operations in out-of-area conflicts. The central concept was to create, over time, an advanced, primarily European force for high-intensity conflicts that would catalyze force transformation and capability acquisition in Europe, promote Transatlantic force interoperability, and provide Europe with out-of-area capabilities to match its new strategic direction and

reorient NATO toward out-of-area expeditionary operations. The hope was and is that this type of operational force would, along with other steps, help to revitalize the NATO alliance and improve Transatlantic security relations in these times of tensions and drift.

Critical overviews from the front line of ionic liquids research *Ionic Liquids Completely UnCOILed: Critical Expert Overviews* concludes the discussion of new processes and developments in ionic liquid technology introduced in the previously published volumes, *Ionic Liquids UnCOILed* and *Ionic Liquids Further UnCOILed*. The goal of this volume is to provide expert overviews that range from applied to theoretical, synthetic to structural, and analytical to toxicological. The value of book lies in the authors' expertise, and their willingness to share it with the reader. Written by an international group of chemists, the book presents eleven overviews of specific areas of ionic liquid chemistry including: What is an Ionic Liquid? Molecular modelling Crystallography Chemical engineering of ionic liquid processes Toxicology and Biodegradation Organic reaction mechanisms Edited by Professor Ken Seddon and Dr Natalia Plechkova, world leaders in the field of ionic liquids, this book is a must read for R&D chemists, educators, and students, and for commercial developers of environmentally sustainable processes. It offers insight and appreciation for the direction in which the field is going, while also highlighting the best published works available, making it equally valuable to new and experienced chemists alike.
