Sterile Insect Technique: Principles and Practice in Area ...

The sterile insect technique (SIT) is a method of biological insect control, whereby overwhelming numbers of sterile insects are released into the wild. The released insects are preferably male, as this is more cost-effective and the females may in some situations cause damage by laying eggs in the crop, or, in the case of mosquitoes, taking blood from humans. The sterile males compete with wild males to mate with the females. Females that mate with a sterile male produce no offspring, thus redu

Sterile insect technique - Wikipedia

It is a challenge to bring together all relevant information about the sterile insect technique (SIT) and its application in area-wide integrated pest management (AW-IPM) programmes; this book is the first attempt to do this in a thematic way. Since SIT practitioners tend to operate in the context of only one insect pest species, it was also a challenge for authors to develop and write their ...

The sterile insect technique (SIT) is a control strategy that uses radiation to produce genetic mutations or chromosomal breaks to generate sterile adult insects. These sterile insects are released into the wild to suppress and eventually eradicate wild pest populations (reviewed in Reichard, 2002).

One such tactic could be the sterile insect technique (SIT), which relies on the production and release of sufficient sterile males to induce sterility in the wild females which, over time, causes the target population to decline . The SIT has no regulatory requirements and the technique would be combined with others as part of an area-wide integrated pest management (AW-IPM) approach to reduce the vector population below the threshold required for disease transmission.

DIR-SIT - SIT_Glossary

The sterile insect technique (SIT) is a species-specific form of birth control imposed on the pest population. It is a powerful tool for “mopping up” sparse pest populations, and is most efficient when applied as a tactic in a system deployed on an area-wide basis.
