Dialysis is a procedure to remove waste products and excess fluid from the blood when the kidneys stop working properly. It often involves diverting blood to a machine to be cleaned. Normally, the kidneys filter the blood, removing harmful waste products and excess fluid and turning these into urine to be passed out of the body.

The diabetic diet recommends 45 to 75 grams of carbohydrate with each meal and spacing meals 4 to 5 hours apart. This recommendation is good for the kidney diet, too. Both the kidney and diabetic diet help to keep your heart healthy. In some cases, you may need to make only a few changes in your diet to fit your needs as a kidney patient.
