for kids with a visual impairment Visual Impairment An Overview

Visual impairment - where a person has sight loss that cannot be fully corrected using glasses or contact lenses. Visual impairment may be congenital (present from birth) or acquired (develops after birth). Several causes of visual impairment are age-related, e.g. cataract, glaucoma and macular degeneration. Visual impairment is therefore more common in the elderly than in children.

Visual Impairment Visual impairments are frequently encountered as a result of loss of visual acuity secondary to conditions such as cataract, diabetic retinopathy, glaucoma, macular degeneration, and retinal degeneration. From: Clinical Gynecology, 2006

Visual Impairment - an overview | ScienceDirect Topics

“Visual impairment” is a broad term that is used to refer to any degree of vision loss that affects a person’s ability to perform the usual activities of daily life. It does not refer to the kind of vision many of us have who need to wear eyeglasses or contact lenses to read a book comfortably or see highway signs when we’re driving a car.

usual means, such as glasses. Some also include those who have a decreased ability to see because they do not have access to glasses or contact lenses.

Visual impairment - Wikipedia

Vision impairment can range from no vision – blindness – or very low vision to not being able to see particular colours. Babies might have vision impairment at birth. It can also happen later as a result of disease, injury or a medical condition. The way a child behaves or uses his eyes might be a sign of a problem with the way he sees.
